INFRASTRUCTURE / PLATFORM ENGINEER

Infrastructure and platform engineer with 6 years of professional experience, the last 4+ building and running production Kubernetes platforms on AWS for Indonesian banks, telcos and enterprises, and Oracle Cloud landing zones since 2026. Day-to-day work covers Amazon EKS, Terraform across multi-account estates, GitLab CI/CD and ArgoCD. Holds nine AWS certifications, three at Professional level.

KEY COMPETENCIES

Kubernetes (Amazon EKS)	GitLab CI/CD & ArgoCD	Python & Bash
Terraform (multi-account)	Karpenter, KEDA & Helm	Observability & Cost Control
Amazon Web Services	Oracle Cloud (OCI)	Incident Response & RCA
Linux (Red Hat Enterprise)	VPN, Transit Gateway & DRG	AI-Assisted Engineering

PROFESSIONAL EXPERIENCE

PT MITRA INTEGRASI INFORMATIKA **Feb 2025 - Now**

Technical Consultant - DevOps Specialist

Delivery engineer on client engagements across AWS and Oracle Cloud, owning the work from design documents through Terraform build, go-live and handover.

Projects:

- **Bank BJB – Greenfield AWS Platform: EKS, GitLab CI/CD & ArgoCD GitOps**
  - Built 3 Amazon EKS clusters totaling 20 managed nodes from a five-stack Terraform layout using for_each, covering VPC CNI custom networking on a secondary CIDR, IRSA, and Helm-managed ALB controller, metrics-server, and cluster autoscaler.
  - Onboarded 64 application repositories onto GitLab CI and Amazon ECR, delivered through a hub-and-spoke ArgoCD setup, with 63 services running healthy across the three clusters.
  - Built three shared pipeline templates with an opt-in image-bump-and-sync loop, adopted across 59 repositories with every pipeline green. Application teams enable delivery with a single variable instead of writing their own CI.
  - Applied KEDA to scale a WebSocket-based service on connection count, after CPU-based HPA proved a poor signal for pods that sit at steady utilization even when idle.
  - Ran AZ-failure resilience and stress testing against a parallel GCP bid, reaching a 99.7% success rate under a 25,000-user load, alongside an x86 versus Graviton benchmark and an AWS versus GCP cost comparison.
- **Bank BJB – PERSIB Jersey Sale Platform on Amazon EKS**
  - Built dev and production environments in two new AWS accounts from Terraform in under a week, covering a public ALB with AWS WAF, Amazon EKS with Karpenter, and RDS PostgreSQL Multi-AZ, for a limited-stock jersey sale that BJB ran inside its DIGI mobile banking app.
  - Attached both VPCs to the bank network through a shared Transit Gateway for the DIGI savings-balance check. The platform went live on 19 Aug 2026 after BJB's penetration test and served peaks of 9,100 requests per hour at 48 ms average latency.
- **Indonesia Investment Authority – OCI Landing Zone & Bank Host-to-Host Connectivity**
  - Designed the Oracle Cloud landing zone for Indonesia's sovereign wealth fund through HLD, LLD and runbook releases up to v1.6, covering 33 compartments, a hub-and-spoke network where all cross-compartment traffic crosses the DRG, OCI-native console sign-in with MFA, and Entra federation for applications.
  - Built host-to-host connectivity for bank-statement exchange with nine banks moving off Azure, using IPSec site-to-site VPNs on a shared DRG, a NAT instance for banks that require address translation, and a source-IP-preserving public NLB for banks that connect over the internet. Mandiri and BRI deliver statements daily.
  - Built the production SFTP environment in Terraform through OCI Resource Manager, with its own VCN, DRG route table, NLB, bastion, vault-held host keys and transfer logging, plus the network for the ERP team's OCI Functions PGP decryption pipeline.
- **hibank – GKE to Amazon EKS Migration (core banking & BNPL platform)**
  - Rebuilt the production Kubernetes layer for EKS from live GKE state, covering 297 manifests across 11 resource kinds including 61 Deployments, 64 Services, 64 ConfigMaps, and 83 SecretProviderClasses.
  - Wrote a 46-script Python and Bash conversion toolchain to make the conversion repeatable across staging, UAT, and production, covering GCP Secret Manager CSI to native Kubernetes Secrets, Filestore volumes to EFS CSI, GKE Ingress and BackendConfig to nginx-ingress, NodePort to ClusterIP behind NLB annotations, and Artifact Registry references to ECR across a 65-image inventory.
  - Re-mapped a 92-row GCP IP inventory onto DNS names and gated the cutover behind verification scripts for IP-to-DNS mapping and EKS readiness, surfacing mismatches before the switch.
  - Delivered the surrounding platform work, including a Terraform landing-zone baseline with CloudTrail, Config, KMS, SSM patching, and central backup, AWS SSO migration across 25 accounts and 109 assignments, a Cloud Run job re-platformed to container-image Lambda, and log analysis moved to S3 and Athena.
- **IDSurvey – GitLab Platform & CI/CD Modernization on AWS**
  - Ran a self-managed GitLab CE instance in a private subnet reachable only through SSM, hosting 44 projects across 6 namespaces.

- Refactored deployments from build-on-the-host over SSH to runner-built images pushed to ECR and pulled by the target hosts, with rollback by commit-SHA tag and secrets moved out of the repository.

- **Garudafood – Amazon API Gateway & EKS Fargate Upgrade**
  - Implemented Amazon API Gateway in front of the MyGF mobile app services, from route design through Postman test collections, with formal handover accepted by Garudafood in February 2026.
  - Upgraded Amazon EKS on Fargate from Kubernetes 1.32 to 1.35 in three sequential phases in one change window, after a deprecated-API scan, a Pod Disruption Budget audit and an add-on version plan for each phase.
- **Additional deliveries**
  - Artajasa – Replatform: Kubernetes on GKE → Amazon EKS
  - Panin Dai-Ichi Life – Replatform: rewrote all Rancher (Kubernetes) manifests from scratch for Amazon ECS
  - BRI Danareksa – Replatform: on-premise API management → Amazon API Gateway, plus a new AWS disaster recovery site

PT MASTERSYSTEM INFOTAMA **Dec 2021 - Jul 2024**

System Engineer

Delivered AWS migrations for enterprise clients, most of them moving container workloads off on-premise OpenShift onto Amazon EKS.

Projects:

- **Telkomsel – On-Premise OpenShift to Amazon EKS Migration**
  - Migrated two production platforms, Virtual Assistant and MePro, from on-premise OpenShift to Amazon EKS, covering assessment, target architecture, and AWS network and security setup, then added CloudFront and Redis to the MePro environment.
- **PT Bayan Resources Tbk – Disaster Recovery Site on AWS**
  - Delivered an AWS disaster recovery site from procurement through architecture design, network and access setup.

PT PERTAMINA TRAINING CENTER **Sept 2020 - Dec 2021**

Junior Advisory Shared Service - Human Capital

Analyzed company policies and employee behavior and gathered requirements for a custom internal application.

SIDE PROJECTS

csps-calc – Multi-Cloud Cost Calculator (csps-calc.vercel.app) **Oct 2026 - Present**

- Built a free public calculator that prices one architecture on AWS, Google Cloud, Oracle Cloud and Azure on the same board, with nested cards (disk in VM, VM in cluster), commitment-discount comparison, and one-step moves of a site to another cloud.

Bundahara – Personal Finance Web App for Indonesia (bundahara.app) **Aug 2026 - Present**

- Co-building a personal finance SaaS in production with open sign-up: an Expo Router web bundle on Cloudflare Pages backed by Supabase Postgres with row-level security, plan gating, multi-currency, receipt OCR and Midtrans billing.

rayhan-portfolio – Interactive Architecture Portfolio **Feb 2026 - Present**

- Built this portfolio as an interactive AWS-style architecture diagram in hand-written HTML and CSS on Vercel, with an AI assistant on a self-hosted Ollama model behind a serverless endpoint and a rule-based fallback when the model is offline.

CERTIFICATIONS

AWS Certified Developer – Associate
Amazon Web Services (AWS)
Oct 2026 - Oct 2029

AWS Certified Data Engineer – Associate
Amazon Web Services (AWS)
Aug 2026 - Aug 2029

AWS Certified Security – Specialty
Amazon Web Services (AWS)
Nov 2025 - Nov 2028

AWS Certified Solutions Architect – Professional
Amazon Web Services (AWS)
Apr 2024 - Apr 2027

AWS Certified Solutions Architect – Associate
Amazon Web Services (AWS)
May 2022 - Apr 2027

AWS Certified Cloud Practitioner
Amazon Web Services (AWS)
Oct 2026 - Oct 2029

AWS Certified Gen AI Developer – Professional
Amazon Web Services (AWS)
Mar 2026 - Mar 2029

AWS Certified DevOps Engineer – Professional
Amazon Web Services (AWS)
Jun 2025 - Jun 2028

AWS Certified SysOps Administrator – Associate
Amazon Web Services (AWS)
Jul 2022 - Jun 2028

EDUCATION

Bandung Institute of Technology – Bandung
Bachelor's Degree in Biomedical Engineering - 2020

Japanese Language Training **Jul 2024 - Feb 2025**
Structured Japanese language training covering business communication and technical discussion.
