INFRASTRUCTURE / PLATFORM ENGINEER

AWS-certified infrastructure and platform engineer with 5 years of experience building and operating production Kubernetes platforms on AWS. Strong hands-on expertise in Amazon EKS, Terraform, ArgoCD, and GitLab CI/CD, with a focus on the shared pipelines and internal tooling that application teams deploy through. Comfortable working remotely and asynchronously across time zones.

KEY COMPETENCIES

Kubernetes (Amazon EKS)

GitLab CI/CD & Runners

Python & Bash

Terraform (multi-account)

ArgoCD & GitOps

Observability & Cost Control

Amazon Web Services

Helm & Kustomize

Incident Response & RCA

Linux (Red Hat Enterprise)

Developer Tooling & DX

AI-Assisted Engineering

PROFESSIONAL EXPERIENCE

PT MITRA INTEGRASI INFORMATIKA

Feb 2025 - Now

Technical Consultant - DevOps Specialist

Platform and DevOps engineer for enterprise clients, building and operating containerized platforms on AWS. Day-to-day work covers Amazon EKS and its networking, Terraform across multi-account environments, GitLab CI/CD and ArgoCD delivery pipelines, and the shared tooling application teams deploy through.

Projects:

• Bank BJB – Greenfield AWS Platform: EKS, GitLab CI/CD & ArgoCD GitOps

- Built 3 Amazon EKS clusters totaling 20 managed nodes from a five-stack Terraform layout using for_each, covering VPC CNI custom networking on a secondary CIDR, IRSA, and Helm-managed ALB controller, metrics-server, and cluster autoscaler.
- Onboarded 64 application repositories onto GitLab CI and Amazon ECR, delivered through a hub-and-spoke ArgoCD setup, with 63 services running healthy across the three clusters.
- Built three shared pipeline templates with an opt-in image-bump-and-sync loop, adopted across 59 repositories with every pipeline green. Application teams enable delivery with a single variable instead of writing their own CI.
- Worked inside the application layer where the platform ended, repointing services through settings.xml and Dockerfile variables and root-causing Java boot failures that had been reported as network problems.
- Applied KEDA to scale a WebSocket-based service on connection count, after CPU-based HPA proved a poor signal for pods that sit at steady utilization even when idle.
- Ran AZ-failure resilience and stress testing against a parallel GCP bid, reaching a 99.7% success rate under a 25,000-user load, alongside an x86 versus Graviton benchmark and an AWS versus GCP cost comparison.
- Reconciled live console drift back into Terraform state until terraform plan reported no changes.

• hibank – GKE to Amazon EKS Migration (core banking & BNPL platform)

- Rebuilt the production Kubernetes layer for EKS from live GKE state, covering 297 manifests across 10 resource kinds including 61 Deployments, 64 Services, 64 ConfigMaps, and 83 SecretProviderClasses.
- Wrote a 46-script Python and Bash conversion toolchain to make the conversion repeatable across staging, UAT, and production, covering GCP Secret Manager CSI to native Kubernetes Secrets, Filestore volumes to EFS CSI, GKE Ingress and BackendConfig to nginx-ingress, NodePort to ClusterIP behind NLB annotations, and Artifact Registry references to ECR across a 65-image inventory.
- Re-mapped a 92-row GCP IP inventory onto DNS names and gated the cutover behind verification scripts for IP-to-DNS mapping and EKS readiness, surfacing mismatches before the switch.
- Bootstrapped cluster networking and ingress across six environments using VPC CNI custom networking with per-AZ ENIConfig, prefix delegation, and pod security groups, plus nginx-ingress installed via Helm with per-environment values behind an NLB.
- Delivered the surrounding platform work, including a Terraform landing-zone baseline with CloudTrail, Config, KMS, SSM patching, and central backup, AWS SSO migration across 25 accounts and 109 assignments, a Cloud Run job re-platformed to container-image Lambda, and log analysis moved to S3 and Athena to reduce retention cost.

• IDSurvey – GitLab Platform & CI/CD Modernization on AWS

- Ran a self-managed GitLab CE instance in a private subnet reachable only through SSM, hosting 44 projects across 6 namespaces.
- Refactored deployments from build-on-the-host over SSH to runner-built images pushed to ECR and pulled by the target hosts, with rollback by commit-SHA tag and secrets moved out of the repository.
- Maintained 8 Terraform stacks covering multi-account networking, Site-to-Site VPN, and managed prefix lists, plus 4 Amazon EKS clusters on Kubernetes 1.36.

• Indonesia Investment Authority – OCI Landing Zone & Multi-Cloud Platform

- Built a CIS-benchmarked hub-and-spoke landing zone on Oracle Cloud in Terraform, covering 4 compartments, 3 VCNs, and a DRG, with a reusable module for onboarding new workloads.
- Delivered it through IaC CI/CD using Resource Manager stacks with pipelines running plan on pull request and apply on merge, alongside Cloud Guard, Security Zones, Vault, and a log pipeline into the customer SIEM.

- Identified a region-availability defect during design review. The region named throughout the design does not exist, and the only Indonesian region lacks the compute shape the design depended on. Corrected before build started.
- **Artajasa – GKE to Amazon EKS Migration**
 - Led assessment, architecture design, and secure AWS network setup to migrate Kubernetes workloads from GKE to Amazon EKS, ensuring scalability and operational stability.
- **Panin Dai-Ichi Life – On-Premise Rancher to Amazon ECS Migration**
 - Migrated container workloads from on-premise Rancher to Amazon ECS, covering platform assessment, target design, and AWS networking and security implementation.
- **BRI Danareksa – DR Site & API Management Migration**
 - Designed and implemented an AWS-based disaster recovery site and migrated on-premise API management to Amazon API Gateway with secure network and access controls.

PT MASTERSYSTEM INFOTAMA

Dec 2021 - Jul 2024

System Engineer

Designed and implemented resilient cloud solutions on AWS for enterprise clients, focused on migrating container workloads off on-premise OpenShift and on applying AWS security and networking best practices at every layer.

Projects:

- **Telkomsel – Virtual Assistant Application: On-Premise OpenShift to Amazon EKS Migration**
 - Migrated the Virtual Assistant platform from on-premise OpenShift to Amazon EKS, covering assessment, target architecture design, and secure AWS network and security setup.
- **Telkomsel – MePro Application: On-Premise OpenShift to Amazon EKS Migration**
 - Led the migration of the MePro application from on-premise OpenShift to Amazon EKS through platform assessment, architecture design, and AWS security implementation.
- **Telkomsel – MePro Extension: AWS Modernization (CloudFront & Redis)**
 - Modernized the existing AWS environment by enhancing architecture and integrating CloudFront and Redis to improve performance, scalability, and reliability.
- **PT Bayan Resources Tbk – Disaster Recovery Site on AWS**
 - Delivered the procurement and implementation of an AWS-based disaster recovery site, including architecture design and secure network and access configuration.

PT PERTAMINA TRAINING CENTER

Sept 2020 - Dec 2021

Junior Advisory Shared Service - Human Capital

Analyzed company policies and employee behavior, driving the development of a customized internal application to optimize operational efficiency and ensure compliance.

SIDE PROJECT

youtube-clipper – AI Video Pipeline

2026 - Present

- Built a Python CLI and local web GUI that turns long-form video into short-form vertical clips, each shipping with per-platform upload copy for TikTok, Instagram Reels, YouTube Shorts, and X.
- Pipeline covers yt-dlp or local source input, faster-whisper word-level transcription, Claude for segment ranking and copywriting, then ffmpeg and mediapipe for face-tracked reframing, karaoke captions, and overlays.
- Run as a side business on my own themed accounts, covering the publishing side of social media as well as the tooling behind it.

CERTIFICATIONS

AWS Certified DevOps Engineer – Professional

Amazon Web Services (AWS)

Jun 2025 - Jun 2028

AWS Certified Solutions Architect – Professional

Amazon Web Services (AWS)

Apr 2024 - Apr 2027

AWS Certified SysOps Administrator – Associate

Amazon Web Services (AWS)

Jul 2022 - Jun 2028

Red Hat Certified System Administrator (RHCSA)

Red Hat

Sept 2023 - Sept 2026

AWS Certified Security – Specialty

Amazon Web Services (AWS)

Nov 2025 - Nov 2028

AWS Certified Gen AI Developer – Professional

Amazon Web Services (AWS)

Mar 2026 - Mar 2029

AWS Certified Solutions Architect – Associate

Amazon Web Services (AWS)

May 2022 - Apr 2027

EDUCATION

Bandung Institute of Technology – Bandung

Bachelor's Degree in Biomedical Engineering - 2020

Japanese Language Training

Jul 2024 - Feb 2025

Completed structured Japanese language training with focus on business communication, technical discussions, and cross-cultural communication.
